

PORS2000RO

Swing gate for ground embedding

The swing gate for ground embedding is designed to control and secure access points in professional, industrial, or public environments. With its adjustable length from 1150 to 2000 mm and Ø 115 mm post, it offers excellent adaptability to various installation needs. The $\pm 90^\circ$ pivot opening system ensures smooth operation, while the locking pin provides reliable and secure closure. Designed to be embedded directly into the ground, the gate offers maximum stability and long-lasting durability. Its red finish ensures high visibility, making this robust swing gate an efficient solution for safe and controlled access management.
