

STOPFRAME01

Rubber structure for embedding with a parking bollard to reserve a parking space. Once the embedded structure is installed, it protects the bollard when it is folded down to allow vehicle passage. The bollard is equipped with 2 polypropylene anti-friction rings to facilitate handling, and the 2 class 1 reflective red bands provide increased visibility. It comes with a lock with a unique opening and a set of 3 keys. Feet are made of hot-dip galvanized cast iron. Stainless steel fixings are provided to secure the bollard to the ground through the structure.

Customs code 4016999790
EAN 3321360055958

Color : Grey

Material : Galvanized steel

Secondary material : Rubber

Specifications :

- Rubber structure with a parking bollard for reserving a parking space.
- The embedded structure protects the bollard when it's folded down for vehicle passage.
- It includes 2 polypropylene anti-friction rings, 2 Class 1 red reflective bands, and various possible locks.
- Concrete fixings are included.
- The bollard has hot-dip galvanized cast iron feet.
- Stainless steel fixings are provided to secure the bollard to the ground through the structure.
